Game 7 - Days of the Week - 4 in a Row

You need counters.

How to play

Divide the players into two groups. Each group receives coloured counters. For example: group A receives red counters and group B receives green counters.

Place the cards face down in a pack in the middle of the group.

Version 1: The first player picks up a card, for example: 'Monday'. The player reads the card and places a counter on one of the 'Monday' squares.

Version 2: The first player picks up a card, for example: 'The 1st day of the week'. The player reads the card and places a counter on one of the 'Sunday' squares and says, "Sunday is the 1st day of the week."

The first group to have 4 counters in a row, either horizontally, vertically or diagonally, is the winner.
